I. EasySave

How to use EasySave software ?

When you get to the software there are several options available to you.

A. Create a backup environment.

To create a backup environment, click on the button "new environment".

Then enter the name:

Example: "test".

Then enter the path of the source:

Example: "C:\Users\EasySave\Desktop\DirectorySource".

And destination folder:

Example: "C:\Users\EasySave\Desktop\DirectoryDestination".

Once the backup environment is created you will be redirected to the menu concerning this environment.

B. Delete a backup environment.

To delete this environment simply choose an environment from the list on the left and click

on the "delete this environment" button.

C. Run a backup.

To run a backup, you have to select the environment from the list. So, choose your environment, once the environment is chosen, 2 options are available:

- Make a full backup.
- Make a differential backup, by the way this option is available once that you have done a full backup on a specific environment.

Once a backup is done, a folder has been created with the date and time.
You can pause, resume and cancel a backup in progress.

D.   Restore a backup.

After selecting an environment, you will see the list of backups, that you have already made. Choose the one you want to restore.

E.   Run multiple backups.

If you click on button run multiple backups, you will get to a menu that will show you all the available environments. You click on an environment and select which type of backup you want to run and so on. To finish, click on the button "Run all backup".
You can pause, resume, and cancel a backup in progress.

F.   Multiple languages.

You can change the language on the settings menu and click on the "French" button to have the software in French or click on the "Anglais" button to have the software in English.

G.   Settings
1.   Business software
If you do not want to run a backup while a software is running in the background, you must enter the name of the software in the business software part. Now, if it is detected, you will no longer be able to start a backup. If you had scheduled several backups and the software is detected during execution, then the current backups will be paused.

2.   Encrypted files extensions
If you want to encrypt some files you have to go to the "Encrypted files extensions" part and enter the name of the extensions, example: ".docx or docx".

3.   High priority file extensions
Are considered as priority files, the files whose extensions are declared by the user in a predefined list (present in the general parameters).

4.   Blocking File size
Choose the file size limit for simultaneous transfer to avoid saturating bandwidth.

II.   Remote EasySave

In this application, you can access to the list of environments. You will be able follow in real time the progress of your backups, to pause, to resume, or cancel a backup in progress.
